

HiCap UW

HiCap UW is a quick setting, marine-grade, cementitious patching and finishing compound that is formulated for use underwater in fresh, brackish, or salt water environments. HiCap UW may be packed by hand or with the use of a trowel up to 3" deep in a single lift. HiCap UW also has an extended working time, which allows the product to be easily mixed on a dock or barge, and then transported by a diver to the location of the repair without setting up prior to application.

ADVANTAGES

- ✓ Easy mixing - Just add water
- ✓ Abrasion Resistant
