Excell NC 80	2 Years

Batch Numbers: The batch number on each unit of powder provides the code number for the product, the batch number, the date of manufacture, and the bag number within the batch. The batch number on each liquid provides the product code number, batch number, date of manufacture, and in the case of certain states the approval number from the state.

The shelf life is predicated on the product being stored properly, which means being kept in a dry environment and preventing freezing temperatures from affecting the products.
